Assignment:

The aim of this assignment is to use the iris model trained in lab5 for making real-time predictions.

1. Write a producer.py file that reads the iris.csv line by line and writes each row into a particular topic in Kafka.
2. Write a subscriber.py file that uses spark streaming (can be receiver-based, dstream or structured) for producing real-time predictions on these rows by utilizing the model trained in lab5 and calculates the accuracy (the real-time predictions, true labels and accuracy all should get printed on console).

Note that for task 2, you also need to figure out how to save a trained model and load it back for predictions.

Submission:

1. Create a PDF report that contains screenshots demonstrating
 - a. The rows written by producer.py are received by a consumer (basically producer.py works fine)
 - b. The console output generated by subscriber.py
2. The python files - producer.py and subscriber.py

Zip the pdf along with the python files and submit the zip file on Moodle. Also attach screenshots both the tasks.

Note:

The jar files for Structured Streaming are provided below:

1. `gs://bdl2022/lab7/jar_files/commons-pool2-2.6.2.jar`
2. `gs://bdl2022/lab7/jar_files/kafka-clients-2.6.0.jar`
3. `gs://bdl2022/lab7/jar_files/lz4-java-1.7.1.jar`
4. `gs://bdl2022/lab7/jar_files/scala-library-2.12.10.jar`
5. `gs://bdl2022/lab7/jar_files/slf4j-api-1.7.30.jar`
6. `gs://bdl2022/lab7/jar_files/snappy-java-1.1.7.3.jar`
7. `gs://bdl2022/lab7/jar_files/spark-sql-kafka-0-10_2.12-3.1.1.jar`
8. `gs://bdl2022/lab7/jar_files/spark-tags_2.12-3.1.1.jar`
9. `gs://bdl2022/lab7/jar_files/spark-token-provider-kafka-0-10_2.12-3.0.0-preview2.jar`
10. `gs://bdl2022/lab7/jar_files/unused-1.0.0.jar`
11. `gs://bdl2022/lab7/jar_files/zstd-jni-1.4.4-7.jar`

The jar files required for Receiver-based API or DStream-based API can be figured out by looking at the documentation.
